

Guidelines for Completing IACUC001C (Schedule C: Biohazard Materials)

Revised 08/02/2018

This form must be completed for all studies that include the use of biohazards, such as infectious organisms, carcinogens, recombinant DNA or radioisotopes, to be administered to live animals.

All questions must be answered. If some questions are not applicable, please answer NA. After completing the form, print one copy and sign. Submit a PDF with signature to Michele Smith, Office of Grants and Sponsored Research Development via email (smithmr@winthrop.edu).

Question C1:

- IACUC will not approve a proposal involving biohazardous materials that has not been approved by the Institutional Biosafety Committee (IBC.)

Question C2:

- Indicate whether any infectious organisms will be administered in the study. Provide the scientific name and describe the expected effects on the animal. Indicate whether or not the infectious organism can be transferred (inter- or intra-species) from one animal to another and what precautions will be taken to prevent it.

Question C3:

- Indicate whether any carcinogenic or toxic substances will be administered in the study. Provide the chemical name and describe the expected effects on the animal.

Question C4:

- Indicate whether recombinant DNA will be administered in the study. Describe the mutation and the expected effects on the animal.

Question C5:

- Indicate whether any radioactive material will be administered in the study. Provide the chemical name, radioisotope, and dose per animal.

Question C6:

- Describe how the carcass and other potentially hazardous waste will be disposed. Consult the BioSafety Committee for information on disposal of biohazardous waste.
